
ALPHA MINORIS

WHAT THE COMPANY DOES

Alpha Minoris helps private investors purchase and own rental property while reducing the complexity and day-to-day work normally associated with being a landlord.

The company aims to support the full journey:

Financial readiness → property search → analysis → financing → purchase → ongoing management

THE PROBLEM

Buying rental property is fragmented and intimidating.

- A private investor must usually coordinate listings, banks, brokers, documents, notaries, tax topics, tenants, repairs and property management.
- Alpha Minoris solves the problem of the customer having to be the “project manager” across all these disconnected steps.

THE PROBLEM

The target customers are financially stable private individuals who wants real-estate wealth without becoming a hands-on landlord.

Likely customer traits:

- Stable income and savings.
- Interested in long-term wealth or pension security.
- Limited time or real-estate expertise.
- Wants help understanding German property, tax and legal processes.
- May be an expat needing English/German support.

€25,000 savings and €3,500+ monthly net income may be enough for many customers to start.

CUSTOMER JOURNEY

The journey starts before a property is selected and continues after purchase.

- Customer shares goals, income, capital and preferences.
- Platform checks affordability and readiness.
- AI searches listings and off-market options.
- Property documents are analysed.
- Financing offers are compared and presented to the customer who would have the final say in all the decisions.
- Notarisation (which is a legal requirement) and purchase process are supported.
- Autopilot handles rent, repairs, tax documents and reporting.

This is why Alpha Minoris positions itself as more than a mortgage broker or listing platform.

VERMIETER AUTOPILOT: THE AI BEHIND THE SERVICE

Vermieter Autopilot turns property ownership into a managed process

The AI-powered system (**Vermieter Autopilot**) supports the customer before, during and after the purchase of a rental property.

It can help to:

- Build an investor profile from income, capital, goals and preferences.
- Find properties that fit the customer's financial situation.
- Analyse property documents and identify possible risks.
- Compare financing options and calculate expected cash flow.
- Explain complex legal and financial information.
- Support rent administration, tenant communication and repairs.
- Prepare tax documents and monitor the property portfolio.

HOW MY PROTOTYPE SUPPORTS THE JOURNEY

My customer-profile prototype fits at the onboarding stage.

The assignment says the customer profile is the bridge between raw information and a later investment strategy/property search.

My prototype supports Alpha Minoris by turning customer information into structured data:

- Income and expenses
- Available investment capital
- Liabilities
- Property preferences
- Timeline and goals
- Maximum negative cash flow
- Missing information
- Document readiness

This lets later stages make better property-search and financing decisions.

MY QUESTIONS TO THE FOUNDERS

- Which parts of the product are already working, and which are still in development?
 - Besides expats, what are Alpha Minoris' other two core customer profiles, and how does the experience differ for each?
 - How is the property score calculated?
 - Which services are done internally versus through partners?
 - What data is most important during onboarding?
 - How should the customer profile evolve once the customer owns multiple properties?
-

THANK YOU!
